

Inspection Service

Objective

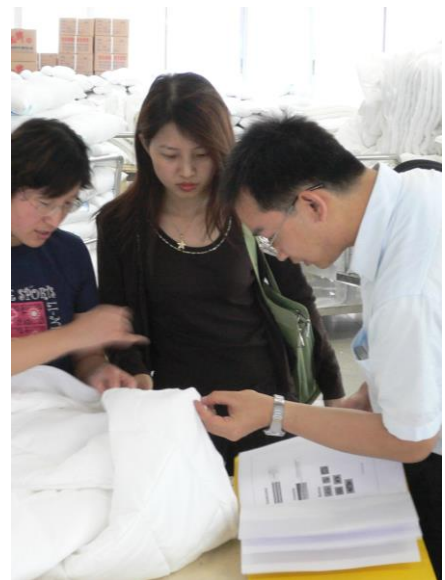

The inspection service offers you the possibility to monitor and control your production in all stages worldwide through an independent testing laboratory with qualified domestic inspectors.

The main goal of the inspection service is a continuous good supplier-customer- relationship.

This service is particularly suited for

- Companies that make worldwide purchases
- Companies that want to assure a consistently high-quality standard by working with accredited laboratories
- Monitoring of quality standards depending on the order
- Assurance of product attributes according to the contract
- Checking of European laws and quality standards

Description

The Hohenstein inspection service can take place in the following phases:

Pre-Production Check

Sample picking before production start to check the materials and components for legal requirements as well as further harmful substances and textile technological quality parameters.

During Production Check

Inspection on site at approx. 20% production status.

Checking for Product conformity, workmanship according to DIN ISO 2859-1, measurements, weight and labeling.

Inspection includes the sample pick up of samples for chemical and textile testing to Hohenstein.

Final Random Check

Inspection on site at approx. 80-100% production status.

Checking for production quantities, product conformity, workmanship according to DIN ISO 2859-1, measurements, weight, packaging, labeling, EAN codes and assortment of the cartons.

Our inspection team would be happy to develop a test concept to your individual needs.

Your benefits as client

- Early detection of faults in the production process to avoid follow-up costs.
- Assurance of the quality before payments become due
- Timely realisation of the ability to deliver and possible delivery shortages
- Highest assurance of the marketability of products
